Proposed wording for Networking TS NB comment GB 9

Introduction

This paper addresses National Body Comment against the Networking TS GB 9.

All changes are relative to N4656.

LEWG discussion notes

[Bug 300 - \[Networking\] PDTS ballot comment 018 \(GB9\): user-provided overloads of `buffer\_size` intended?](#)

Proposed wording

Insert a new subclause under 16.2 [buffer.reqmts], after 16.2.2 [buffer.reqmts.constbuffersequence]:

-16.2.- Buffer size [buffer.reqmts.size]

-1- Several places in this Technical Specification make unqualified calls to `buffer_size`. The context in which these calls are evaluated shall ensure that a unary non-member function named `buffer_size` is selected via overload resolution (C++Std [over.match]) on a candidate set that includes:

- the `buffer_size` function template defined in <experimental/buffer> (16.1 [buffer.synop]) and
- the lookup set produced by argument-dependent lookup (C++Std [basic.lookup.argdep]).
