

P1709R3: Graph Library

Date: 2022-09-19

Project: ISO JTC1/SC22/WG21: Programming Language C++

Audience: SG19, WG21

Authors: Phillip Ratzloff (SAS Institute)
Andrew Lumsdaine (PNNL / University of Washington)

Contributors: Richard Dosselmann (U of Regina)
Michael Wong (Codeplay)
Matthew Galati (SAS Institute)
Jens Maurer
Domagoj Saric
Jesun Firoz (PNNL)
Kevin Deweese (University of Washington)

Revision History

Revision	Description
P1709R3	Communicate that the document is under major revision and a new published revision is expected by the end of 2022.
P1709R2	1. Define the uniform API for undirected & directed algorithms (an extended API also exists for directed graphs). 2. Added concepts for undirected, directed & bidirected graphs. 3. Refined DFS & BFS range definitions from prototype experience. 4. Refined Shortest Paths & Transitive Closure algorithms from input & prototype experience.
P1709R1	Rewrite with a focus on a pure functional design , emphasizing the algorithms and graph API. Also added concepts and ranges into the design. Addressed concerns from Cologne review to change to functional design.
P1709R0	Focus on object-oriented API for data structures and example code for a few algorithms.

Status

P1709 is going through a major revision. We are targeting P1709r4 to be available for the December 2022 mailing.

Note previous revisions are significantly different.
