

LEWG `[[nodiscard]]` policy

Document number: P3201R1

Date: 2024-03-22

Authors: Jonathan Wakely <cxx@kayari.org (mailto:cxx@kayari.org)>, David Sankel <dsankel@adobe.com (mailto:dsankel@adobe.com)>, Darius Neațu <dariusn@adobe.com (mailto:dariusn@adobe.com)>

Audience: Library Evolution

Introduction

This paper is a conclusion due to a direction poll taken by LEWG in Tokyo 2024 (<https://github.com/orgs/cplusplus/projects/23/views/4?pane=issue&itemId=53521817>). Discussions related to P3162R0 (<https://wg21.link/P3162R0>) and P3122R1 (<https://wg21.link/P3122R1>) led to an alternative and simpler policy. More context, introduction, and rationale can be found in the mentioned papers.

LEWG Tokyo 2024 direction poll

POLL: We prefer not having any `[[nodiscard]]` in upcoming proposals to the standard, and also avoid recommendations to implementors in the standard.

SF	WF	N	WA	SA
21	10	2	1	0

Attendance: 27 + 11

Outcome: Consensus in favor (Strongest consensus)

Wording for SD-9

Append to List of Standard Library Policies (<https://www.open-std.org/jtc1/sc22/wg21/docs/papers/2023/p2267r1.html#list-of-standard-library-policies>) section of SD-9 (P2267R1: Library Evolution Policies (<https://www.open-std.org/jtc1/sc22/wg21/docs/papers/2023/p2267r1.html>)):

X. (P3201R1) **[[nodiscard]]** policy: Library wording should not use **[[nodiscard]]**.

Rationale: Warnings are non-normative so **[[nodiscard]]** placement has a spurious impact. Furthermore, implementors are better qualified to identify when and where to emit warnings for their implementations.
