constexpr coroutines

This paper is proposing making coroutines functional during constant evaluation. Even when most of use-cases for coroutines are based on I/O and event based, coroutines are still useful for compile-time based computation, eg. `std::generator`.

Changes

- [R2 → R3: added motivation text, added AST transform approach examples](#)
- [R1 → R2: Updated wording to elide allocator functionality in coroutine promise types, Added discussion about alternative implementation strategies, Added information about decision by various groups which seen this paper.](#)
- [R0 → R1: Changed wording mentioning lifetime of coroutines after `expr.const` 5.2](#)

Timeline

EWG in Wroclaw

Poll: P3367 constexpr coroutines send to CWG and LEWG for inclusion for C++26
